UNMAI Carbon Solutions Announces Integration of its Legacy CER Registry with CONIL's Digital Transaction Platform

Singapore, 26 October 2026 — UNMAI Carbon Solutions Pte Ltd and Envex Technologies Ltd, operator of CONIL, have entered into a Registry Account and Platform Integration Agreement to connect the UNMAI Legacy CER Registry with CONIL's digital transaction platform.

The integration is designed to provide holders of eligible Legacy Certified Emission Reductions (Legacy CERs) with an additional route to market, enabling them to list Legacy CERs on CONIL for purchase and retirement by buyers.

Under the agreement, UNMAI will continue to operate the registry of record, issuing, recording, transferring and retiring Legacy CERs while maintaining the public register and issuing retirement certificates. CONIL will facilitate the transaction process, including credit listings, orders, payments and settlement between sellers and buyers.

The integration will connect the two platforms through an application programming interface (API), enabling relevant project and credit information to be accessed for listings and allowing retirement instructions to be processed and reconciled against UNMAI Registry records.

The collaboration comes as the UNFCCC CDM Registry approaches its scheduled closure on 31 December 2026, making it increasingly important for holders to understand the available pathways for managing their legacy credits.

Yuvaraj Dinesh Babu Nithyanandam, Founder & CEO of UNMAI Carbon Solutions, said:

> *"Legacy CERs represent an important part of the history of international carbon markets. Our work at UNMAI is focused on creating a structured pathway for these credits to retain utility beyond the transition of the CDM Registry. Integrating with CONIL adds a transaction route for eligible Legacy CERs while preserving the registry records and provenance that underpin their traceability."*

Vishwajit, Founder & CEO of CONIL/Envex, said:

> *"Connecting CONIL with the UNMAI Legacy CER Registry is an important step towards making eligible Legacy CERs more accessible to buyers. By bringing registry-linked credit information into the transaction process, we aim to support transparent listings,*

streamlined transactions and clearly documented retirements, helping market participants navigate the evolving carbon market landscape."

Under this agreement, sellers holding Legacy CERs in the UNMAI Registry can onboard directly with Envex, complete the required checks and list eligible Legacy CERs on CONIL. Sellers will set their own prices, and purchases through CONIL will be made for retirement rather than secondary trading.

Each retirement will be executed through the UNMAI Registry and recorded against the relevant credit identifiers. UNMAI will issue a retirement certificate identifying the Legacy CER serial numbers, original CDM serial numbers, beneficiary and retirement purpose, supporting traceability and clear retirement records.

The integration is subject to the parties' technical implementation, testing and production go-live process. Importantly, Legacy CERs are not eligible for any compliance scheme unless the compliance scheme administrators issue official recognition of such assets.

About CONIL

CONIL is a digital carbon credit platform developed by Envex Technologies, based in Abu Dhabi, UAE. It gives businesses single-account access to buy and retire verified carbon credits from leading registries such as Verra, Gold Standard, Isometric, EcoRegistry and the Northern Trust carbon ecosystem. Buyers complete a single KYC process, review full project documentation, and receive a retirement certificate for every purchase. Project developers and credit holders can list their inventory through dedicated storefronts and reach buyers worldwide. Learn more at www.conil.eco
