Extending the utility of legacy CDM CERs

An integrity perspective

Axel Michaelowa, axel.michaelowa@pw.uzh.ch; michaelowa@perspectives.cc

UNMAI webinar, 6 October 2026

Unused CERs – an overlooked category

Source: Michaelowa et al. (2021)

The legacy CER challenge

25 Oct 2026

Last date for requests to transfer eligible CERs to the Article 6.4 registry

25 Nov 2026

Last date for guaranteed processing of cancellation requests

31 Dec 2026

All CDM registry transactions end

1 Jul 2027

Remaining CERs cancelled administratively

- **Millions** of CERs still sit in the CDM registry
- Most remaining CERs were **never eligible** for transition to the Paris Agreement Crediting Mechanism.
- Many CER holders are **project developers in the Global South** who invested in mitigation during the first or second Kyoto commitment period.
- Without action, CERs will just be **lost**

Source: UNFCCC CDM registry FAQ, consulted 1 October 2026

Why does CER reissuance make sense?

1

Preserves the story of the mitigation credit

Links each credit to its CDM serial numbers, project and vintage before the registry closes.

2

Recognises early action

Gives developers who acted early a transparent way to account for past mitigation.

3

Acts as transparency tool

Shows how public registries and digital records can support integrity, if designed carefully.

Conditions for credibility

- The new credit can only be used on the **voluntary market**, it has no Paris Agreement related use cases.
- **No double claiming**: no credit can be reissued while it still exists in the CDM registry.
- **Adaptation share of proceeds need to be paid** once CER has been reissued

Challenge: a registry does not create demand

Barriers

- CER demand collapsed after 2012 and **did not recover**.
- **No compliance outlet remains** for these credits.
- Buyers prefer **recent vintages** and **CCP-labelled** credits.
- Several legacy project types were **structurally non-additional** when registered under the CDM.
- Past experience with **low-priced tokenised credits** weakened trust.

Where demand could come from

- Developer groups making **claims on their own historic footprint**.
- **Contribution claims** that do not imply offsetting.
- Buyers who **value clear information** and are happy with a **disclosed vintage** and **honest grading** that lets buyers pay for quality differences.

Principles for an integrity ranking

Proposed by Perspectives. Scope and implementation under discussion.

1 Real mitigation

Was the underlying activity **additional**, with a credible baseline and **no over-crediting**?

2 Unique credit

Is issuance and cancellation fully traceable, with **no credit existing twice**?

3 Clear claim

What may a buyer credibly say today, given **vintage** and **host country** context?

Design rules

- **Public methodology, criteria and weights**.
- Credit is graded **across several dimensions**; each grade comes with permitted claim language.
- Evaluators are **independent of transaction volumes and revenue** made by the credit platform, with a **review and appeals process**.

Summary

- Good CERs deserve to be **retained** instead of **vanishing in a “black hole”**
- A closing window: supply is **fixed after 2026** and will only shrink.
- **Transparency** is critical
- Challenge: apply **credible grading** while being **conscious of dema**nd.

The CDM showed what weak integrity can destroy.
Closing it transparently and honestly is a final valuable lesson it can offer.

www.unmaicarbon.earth

About UNMAI Carbon

Singapore-headquartered climate advisory and carbon solutions firm building trust infrastructure for global carbon markets.

UNMAI
CARBON SOLUTIONS

Singapore HQ, global reach

A climate advisory and solutions firm working with governments, corporates and carbon market stakeholders, globally.

Unlocking high-integrity carbon markets

High-integrity frameworks, climate finance mechanisms and digital infra that turn claims into verifiable tonnes.

Policy , finance, advisory and digital

Tailored solutions across decarbonisation, net zero and carbon markets, from national strategy to market infrastructure.

Partnership-led delivery

Working with institutions such as TERI and embedding national experts.

> 20

Article 6 and carbon market assignments delivered

> 15

Countries engaged across the team's track record

3

Regions: Asia, Middle East & Gulf, Africa

Carbon Market Digital Products

UNMAI is a Tamil word for truth: the principle behind everything we build.

*** Under final stages of award**

UNMAI Carbon Services: Three Pillars

Integrated advisory , finance and infrastructure for governments and corporates

Net Zero Transition, Climate Policy & Carbon Market Advisory

- Net zero strategies for governments and corporates
- Long-term climate policy design (NDCs, LT-LEDS, CBAM readiness)
- Sectoral decarbonisation planning and pathway development
- Capacity building and institutional readiness programmes

1

Climate Finance & Investment Strategy

- Structuring results-based finance and carbon-linked instruments
- Policy and investment advisory for scaling carbon finance
- ESG and impact-driven capital mobilisation strategies
- Support for MRV-aligned financing mechanisms

2

Carbon Market Infrastructure & Governance

- Design of national and subnational carbon market frameworks
- Article 6 readiness and cooperative approaches
- Blockchain-enabled trust architecture for registries and MRV interoperability
- Support for climate data standardisation and infrastructure governance

3

NAMBĪ: A Digital Public Good for dMRV

Navigating Market Based Instruments (**NAMBĪ**)

UNMAI
CARBON SOLUTIONS

VISION

- A high-integrity, inclusive, Paris-aligned carbon market with harmonised data flows, scaling climate finance to net zero needs, access to global methodologies and tools

MISSION

- As a Digital Public Good, aggregate, standardise and democratise dMRV and carbon solutions, embedding Trust, Transparency, Traceability and Integrity (T^3I).

OBJECTIVES

Common data schemas and protocols

- A common dMRV data protocol, standard formats, decentralised identifiers, open APIs, methodologies access and analysis.

Harmonisation and interoperability

- API-driven integration, schema mapping and dMRV-as-a-Service (dAAS) that bridge voluntary and compliance markets.

Open technical features for the public

- Open-source components, sandbox, documentation and training that build a transparent innovation ecosystem.

Why "NAMBĪ"? It connotes trust, confidence / faith and reliability, from the Tamil word **nambikkai**.

Ecosystem & Strategic Partnerships

CDM CERs : Different Types

Unsold CERs expire and extinguish on 31st Dec 2026 / 1st July 2027

The CDM Journey

- **1997** — CDM established under Kyoto Protocol
- **2005–11** — Gold rush: 8,200+ projects, 2.1B CERs issued
- **2012** — CER price crash — demand collapses
- **2015** — Paris Agreement adopted — CDM future uncertain
- **2021** — Art. 6.4 rules: ~4,700 projects NOT eligible
- **2026** — Legacy CERs Platform launches — last window for value recovery
- **Jan 2027** — **UNFCCC CDM Registry SHUT DOWN — permanent**

0.9B
CERs stranded and not eligible for transition

2,171
Projects affected across 40+ countries

1 Jan 2027
Hard, irreversible, no extension expected for holding account CERs

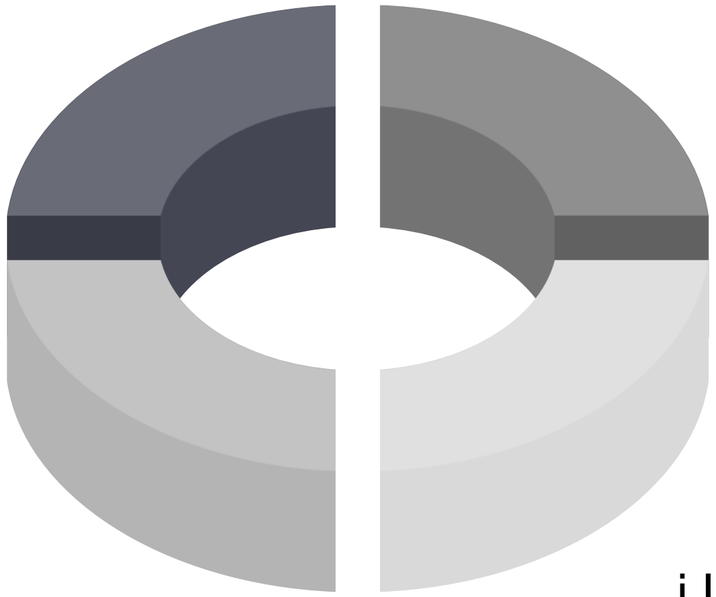

CDM CERs : Different Types

Unsold CERs expire and extinguish on 31st Dec 2026 / 1st July 2027

A

CERs issued during CP1

CERs issued until 31st Dec 2012

B

CERs issued during CP2 / Eligible Glasgow CERs

CERs issued between 1st Jan 2013 – 31st Dec 2020
Eligible 2013 -2020 CERs

C

Transitioned CDM Activity to Article 6.4

CERs issued from 1st Jan 2021 (becomes ITMOs after receiving Host Country Authorization)

D

CERs in Pending Account or in Country Registries

i. Unpaid SOP - CERs on Project Proponents' pending account
ii. CERs transferred to Buyers' Country Registries and not yet retired

The Solution : Key Benefits, Risks and Mitigants

UNMAI
CARBON SOLUTIONS

Regulatory

Cancel from UNFCCC System; position Legacy CERs as voluntary offsets for own emissions and retail markets; precedence available

Market

Quality disclosure / Insetting / **Integrity Ranking***; target ESG buyers who value provenance

Timing

Extension unlikely given CMA decisions and recent notifications by UNFCCC through SB / Email communication

Legal

Precedence from Chile/Colombia/South Africa carbon tax use & South Korea under ETS and UNFCCC's open VC process

Technology

Increased awareness, third party validation, use case dissemination and integration with CAD Trust for data cross verification

***Integrity Ranking :** currently devising a methodology for applying integrity ranking for eligible Legacy CDM Projects. Optional service available for buyers subject to a fee.

Legacy CERs Platform: The Solution

UNMAI
CARBON SOLUTIONS

Step 1

Voluntary Cancellation (VC)

- Project Developers cancel the CERs on CDM Registry citing re-creation

Step 2

Evidence Submission

- Project Developers submit evidence on VC of the CERs on CDM Registry to an Independent & Self-Regulated **UNMAI Carbon Legacy CERs Platform (www .legacycers.earth)**

Step 3

Recreation of CERs as Legacy CERs

- After KYC / Due Diligence, Legacy CERs issued reflecting CERs cancelled on CDM Registry

Step 4

Enabling Transaction

- Project Developers will market the Legacy CERs in retail market for increasing its liquidity besides internal use . Legacy CERs can be traded and retired.

Transaction Options of UNMAI Legacy CERs

UNMAI
CARBON SOLUTIONS

INSETTING
Re-Issue and Retire

- Developer receives Legacy CERs with a unique identifier linked to original provenance
- Developer finalizes GHG Accounting for their operations
- Legacy CERs used against the internal GHG ER target setting
- Applicable for Parent and Group Companies – against S1 / S2 / S3

RET AIL MARKET
Tokenisation (OPTIONAL)

- Platform Partner mints equivalent Tokens as a digital twin of the Platform Units
- Metadata carries project ID, host country, activity type and vintage
- Tokens traded in retail market (Air Travel, Corporate Events, Q-Commerce etc.,) due to fractionalization

INTEGRITY RANKING
Trade with confidence

- Integrity ranking applied to differentiate quality across the eligible project pool
- Legacy CERs with Integrity Labels traded on Market Place / Trading Platforms (along with Legacy CERs w/o Labels)
- Integrity Label expected to facilitate price differentiation and premium discovery for high-integrity legacy

UNMAI is not guaranteeing successful trade for Legacy CERs and “trade at premium price” for High Integrity Labels due to lack of precedence

CDM CERs : Sample Evidence for Voluntary Cancellation

UNMAI
CARBON SOLUTIONS

Date: 31 July 2026
Reference: [redacted]

United Nations
Framework Convention on
Climate Change

VOLUNTARY CANCELLATION CERTIFICATE

Presented to:

[redacted]

Reason for cancellation:

REASON : CANCELLED FOR THE PURPOSE OF REISSUANCE ON LEGACY CERS PLATFORM BY UNMAI CARBON SOLUTIONS PTE LTD

Number and type of units cancelled

14,402 CERs
Equivalent to 14,402 tonne(s) of CO2

Start serial number: [redacted]
End serial number:

The certificate is issued in accordance with the procedure for voluntary cancellation in the CDM Registry. The reason for cancellation included in this certificate is provided by the canceller.

Legacy CERs Platform: Fee Schedule

UNMAI CARBON SOLUTIONS

STEP 6

Project Documents — Approval Flow

UNMAI
CARBON SOLUTIONS

Monitoring Cycles — Gating Rules

1. **A cycle’ s dates must fall within an existing period**

   Matched against the project’s own Issued CERs Table — a new period is added there first if needed

2. **Each period can back only one monitoring cycle**

   A period already used by another cycle cannot be reused

3. **Per-cycle documents are gated in sequence**

   Monitoring Report → Verification Report → Issuance Request Form → Voluntary/Administrative Cancellation Report

4. **Multiple cycles can be in progress at once**

   By design — a project is not limited to one active cycle at a time

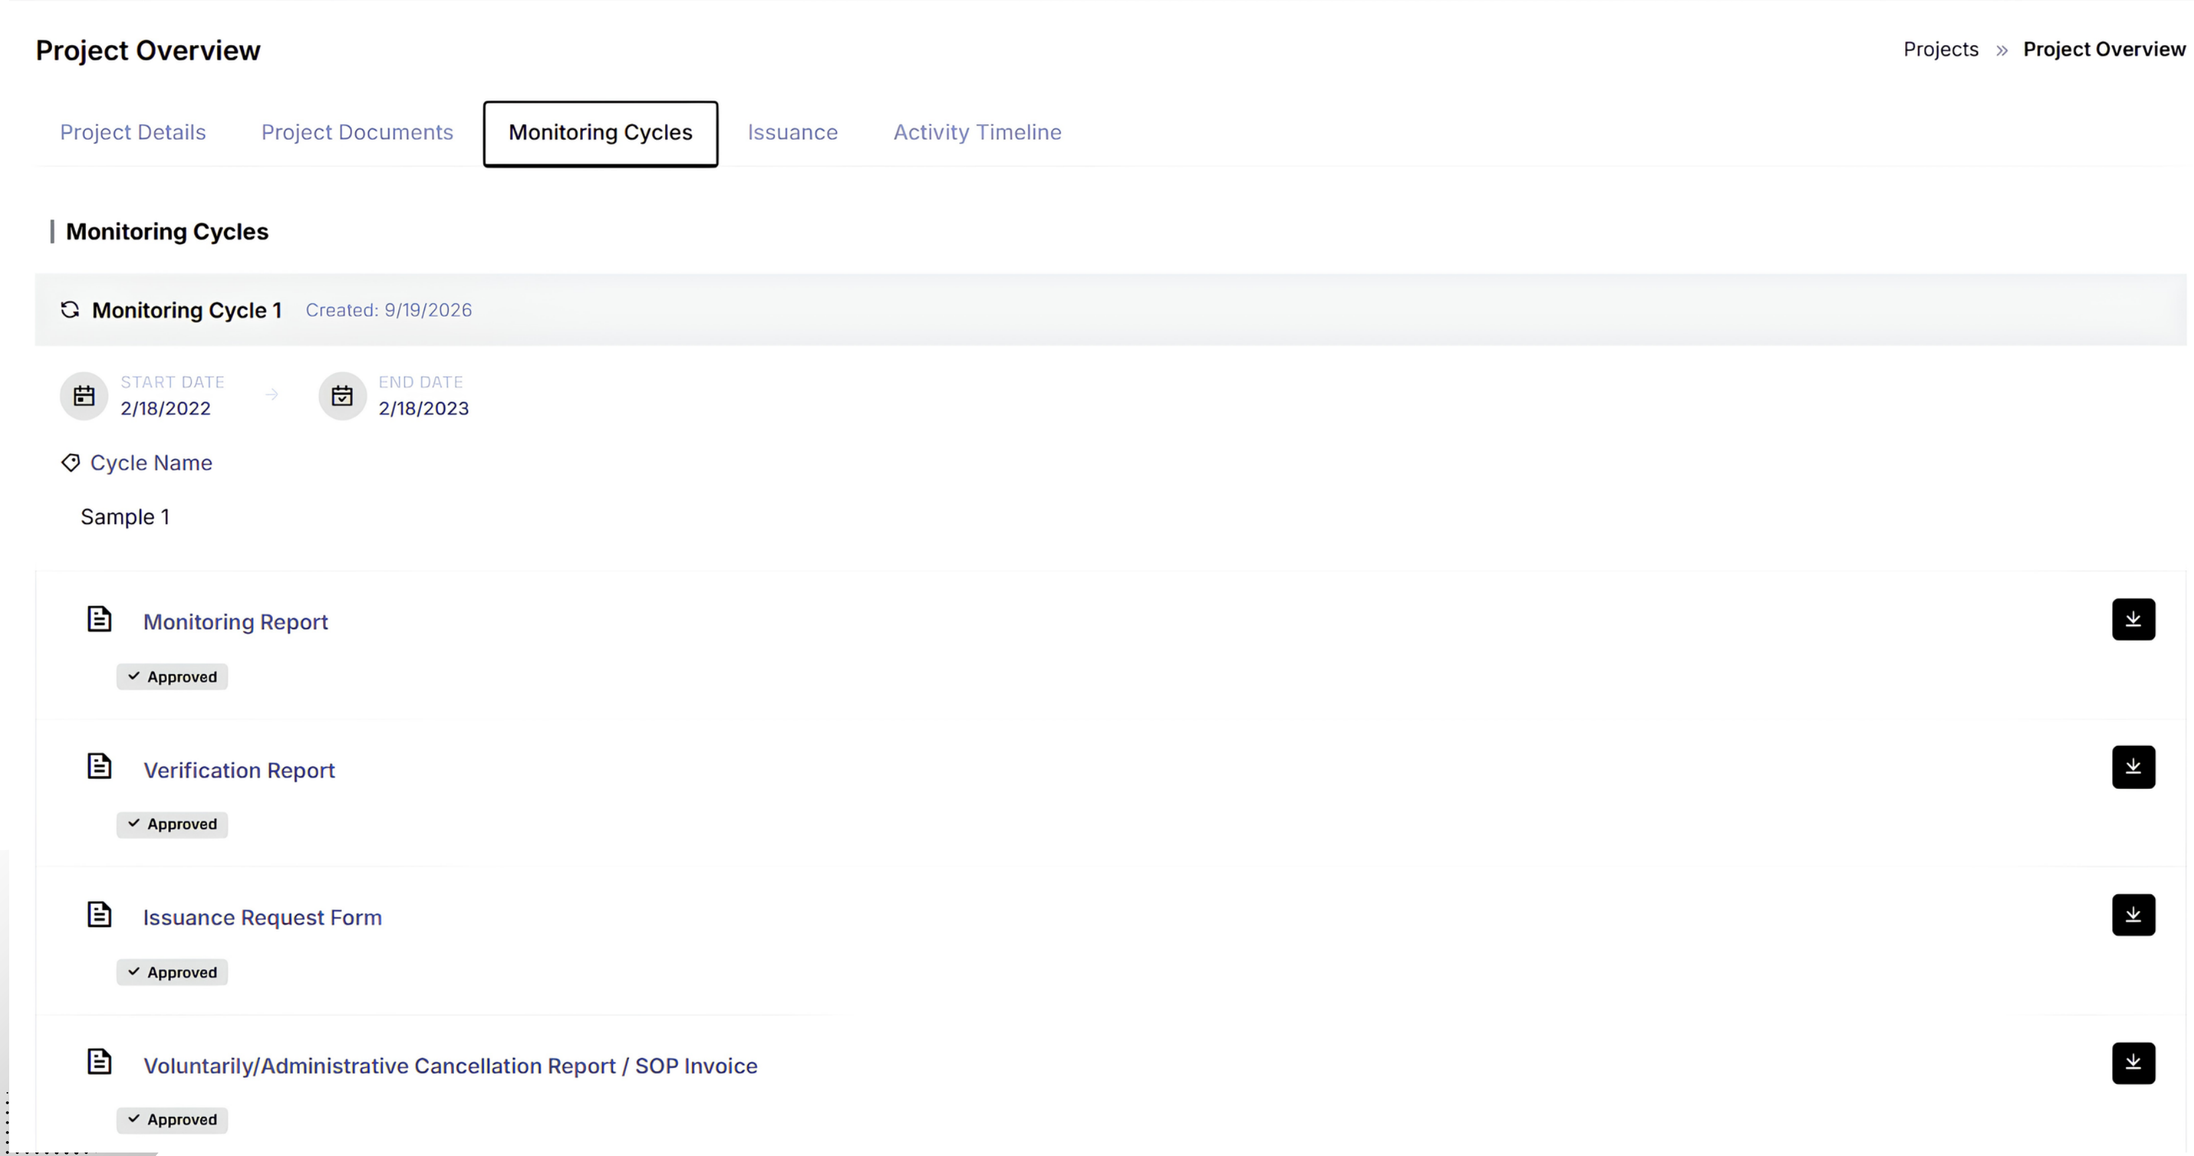

5. **Every upload and approval is notice-driven**

   The Project Owner sees a plain banner while a cycle document awaits Registry Admin approval

Legacy CERs: onboarding and eligibility review

UNMAI
CARBON SOLUTIONS

Steps a project proponent completes before project listing

ST AGE: COMP ANY & PROJECT ONBOARDING

1 Submit company & project details

PROJECT PROPONENT

Company details and a list of projects are shared to begin the review.

2 Provide company & authority documents

PROJECT PROPONENT

Incorporation, ownership and management documents, plus mandate evidence where applicable.

3 Provide identity documents

PROJECT PROPONENT

Government ID and proof of address for relevant directors, signatories and beneficial owners.

4 Provide project design & registration documents

PROJECT PROPONENT

Project design document, validation report, host country approval, and registry ID/link.

5 Provide monitoring, verification, issuance & cancellation evidence

PROJECT PROPONENT

Monitoring and verification reports, certification report, issuance history for the credits and cancellation evidence under review.

6 Platform review , acceptance and successful onboarding

PLA TFORM

Platform reviews submission, completes its standard eligibility and integrity checks and successfully onboards the eligible Project.

A companion checklist sets out the supporting documents needed at each step.

Legacy CERs: Issuance, Transfer and Retirement

Steps a project proponent completes after project listing

ST AGE: LEGACY CERS ISSUANCE, TRANSFER & RETIREMENT

7 Platform issues Legacy CERs

PLA TFORM

Platform issues Legacy CERs based on voluntary cancellation certificate

8 Submission of request for Transfer

PROJECT PROPONENT

Transfer request evidence submission, as per terms.

9 Tokenisation Request (Optional)

PROJECT PROPONENT / PLA TFORM

Request for permission for Tokenisation, review by Platform and approval

10 Retirement and Cancellation

PROJECT PROPONENT / PLA TFORM

Request for Retirement as per format

A companion checklist sets out the supporting documents needed at each step.

Questions on any item can be directed to admin@unmaicarbon.earth
